

## SUMMARY

Computer Science Engineering student with hands-on experience in designing and deploying real-time, multi-role systems using cloud backends and modern frameworks. Strong foundation in backend development, networking, and system design

## EDUCATION

|                                                                      |           |              |
|----------------------------------------------------------------------|-----------|--------------|
| St.Josephs’s College Of Engineering, Semmancheri — BE CSE            | CGPA-8.18 | 2024-present |
| IT Madras, Adayar — BS Data Science and Application                  | CGPA-6.8  | 2024-present |
| Devi Academy Senior Secondary School , Chennai 12 <sup>th</sup> std- | 92.2%     | 2023-2024    |

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                |                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|-------------------------------------------|
| ATRIBS Global Technology Solutions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Application Development Intern | Jun 2025 — Jul 2025   Dec 2025 — Jan 2026 |
| <ul style="list-style-type: none"><li>Selected for a second internship based on performance during the initial training phase.</li><li>Gained exposure to Industry 4.0 concepts, including software–hardware integration and automation systems.</li><li>Participated in industrial visits to IIT Madras Research Park (ICCW) and the Precision Engineering &amp; Technology Centre to study real-world product development and additive manufacturing.</li><li>Led the development of “Police Akka,” a dual-platform safety system with real-time backend integration and role-based workflows.</li><li>Delivered technical presentations on Industry 4.0 and system architecture to industry mentors.</li><li>Attended expert seminars by professionals from Rockwell Automation on automation workflows and engineering expectations.</li></ul> |                                |                                           |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Police App – Emergency Law Enforcement Platform                                                                                                                                                                                                                                                                                                                                                   |
| Tech: Flutter, Firebase, Gemini API, Geolocator                                                                                                                                                                                                                                                                                                                                                      |
| <ul style="list-style-type: none"><li>Built a citizen mobile app and police web dashboard connected via real-time Firebase streams.</li><li>Implemented SOS alerts with live location tracking for rapid incident monitoring.</li><li>Integrated AI-powered legal guidance using GroqAPI.</li><li>Designed incident reporting and role-based access control for police workflows.</li></ul>          |
| 2. PillMatrix – Digital Healthcare Workflow Platform                                                                                                                                                                                                                                                                                                                                                 |
| Tech: Firebase, Gemini API, OCR (Prototype)                                                                                                                                                                                                                                                                                                                                                          |
| <ul style="list-style-type: none"><li>Established a role-based healthcare platform for doctors, patients, labs, and pharmacies.</li><li>Implemented Firebase authentication and Firestore-based medical records.</li><li>Built a Gemini-powered chatbot to answer medicine and prescription queries.</li><li>Designed QR-based patient access and OCR prototype for prescription scanning.</li></ul> |
| 3. Deepfake Defender – Content Authenticity Detection                                                                                                                                                                                                                                                                                                                                                |
| Tech: Python, Machine Learning, Firebase                                                                                                                                                                                                                                                                                                                                                             |
| <ul style="list-style-type: none"><li>Built a deepfake detection prototype for text, images, videos, and URLs.</li><li>Enforced ML-based analysis with confidence scores and risk indicators.</li><li>Developed a web interface for explainable AI outputs and user interaction.</li></ul>                                                                                                           |
| 4. Real-Time Chat Web Application                                                                                                                                                                                                                                                                                                                                                                    |
| Tech: Client–Server Architecture, Render, Netlify                                                                                                                                                                                                                                                                                                                                                    |
| <ul style="list-style-type: none"><li>constructed a real-time chat application supporting multiple concurrent users.</li><li>Integrated hosted backend (Render) with frontend (Netlify) for live messaging.</li><li>Created an internet-based client–server communication and deployment pipeline.</li></ul>                                                                                         |

## CERTIFICATIONS & SKILLS
